## WHAT IS CLAIMED IS:

1

1

3

- A rotary concrete mixing drum comprising: 1. 2
- an interior surface at least partially provided by a polymer impregnated with 3 a slip agent. 4
- The drum of Claim 1 wherein the polymeric includes polyurethane. 2. 1
- The drum of Claim 1 wherein the slip agent has a surface energy less than 3. l the surface tension of a Portland Cement low slump concrete. 2
- The drum of Claim 1 wherein the slip agent has a surface energy of less 4. l about 20 dynes per centimeter. 2
  - The drum of Claim 1 wherein the slip agent is a polydecene. 5.
- The drum of Claim 1 wherein the slip agent is a polyalpha olefin fluid. 6. ı
- The drum of Claim 1 wherein the slip agent is polytetraflourethylene. 7. 1
- The drum of Claim 1 wherein the polymeric material is polyurethane, 8. 1 wherein the slip agent is polytetraflourethylene and wherein at least 2% by weight of the 2 impregnated polymer is polytetraflourethylene.
- The drum of Claim 8 wherein no greater than 5% by weight of the 9. ì
- impregnated polymer along the surface is polytetraflourethylene. 2
- The drum of Claim 1 wherein the polytetraflourethylene is about 2% by 10. l weight of the impregnated polymer along the surface. 2
- The drum of Claim 1 wherein the polymer is polyurethane and wherein the 11. 1 slip agent is a polyalpha olefin. 2
- The drum of Claim 11 wherein no greater than 5% of weight of the 12. 1 impregnated polymer is the polyalpha elefin. 2
- The drum of Claim 12 wherein at least 2% by weight of the impregnated 13. 1 polymer is the polyalpha olefin. 2

1 14. The drum of Claim 11 wherein at least 2% by weight of the impregnated polymer is the polyalpha olefin.

- 1 15. The drum of Claim 11 wherein the polyalpha olefin comprises about 3% by weight of the impregnated polymer along the surface.
- 1 16. The drum of Claim 1 wherein the slip agent is configured so as to not substantially migrate within the polymer.
- 1 17. The drum of Claim 1 including:
  2 an inner layer including the impregnated polymer along the inner surface;
  3 and
  4 an outer layer providing an exterior surface of the drum.
- 18. The drum of Claim 17 wherein the outer layer is non-metallic.
- 19. The drum of Claim 18 wherein the outer layer includes fiberglass.
- 1 20. The drum of Claim 19 wherein the outer layer includes: 2 fiberglass windings about the inner layer;

3

4

1.

2

i

- a first layer of chopper fiberglass over the windings, the first layer having a ground surface with pores; and
- a second layer of chopper fiberglass over the first layer and across the pores.
- 1 21. The drum of Claim 20 wherein the first layer has a first thickness and wherein the second layer has a second lesser thickness.
  - 22. The drum of Claim 20 wherein the first layer has a thickness of about 0.25 inch and wherein the second layer has a thickness of about 0.05 inch.
- The drum of Claim 20 wherein the second layer has a thickness of about 0.1 inch.
- 1 24. The drum of Claim 20 wherein the ground surface has a smoothness from 2 being ground by a 16 grit abrasive.
  - 25. The drum of Claim 17 wherein the outer layer includes:

2	fiberglass windings about the inner layers;		
3	a sacrificial layer over the windings, wherein the sacrificial layer has a		
4	surface having pores; and		
5	a top layer over the sacrificial layer and across the pores.		
1	26. The drum of Claim 17 wherein the outer layer is metallic.		

- The drum of Claim 1 wherein the impregnated polymer has a tensile strength of at least 15 MPa.
- The drum of Claim 1 wherein the impregnated polymer has a Modulus 300% of at least 12 MPa.
- 1 29. The drum of Claim 1 wherein the impregnated polymer has a tear strength of 2 at least 68 kN/m.
  - 30. The drum of Claim 1 including inwardly extending projections configured tos, move material as the drum is rotated, wherein the projections partially provide the interior surface of the drum.

1

2

3

1

2

- 1 31. The drum of Claim 30 wherein the projections have an exterior surface g: including the impregnated polymer.
  - 32. The drum of Claim 31 wherein at least a portion of one of the projections has a thickness completely formed from the impregnated polymer.

1	33.	A fin for use in a concrete mixing drum, the fin comprising:
2		an exterior surface at least partially provided by a polymer impregnated with
3	a slip agent.	
1	34.	A drum barrel for a concrete mixing drum, the barrel comprising:
2		an interior surface at least partially provided by a polymer impregnated with
3	a slip agent.	
1	35.	A method for forming a concrete mixing drum, the method comprising:
2		impregnating a polymer with a slip agent; and
3		forming an interior surface of a concrete mixing drum with the impregnated
4	polymer.	
1	36.	The method of Claim 35 including molding the impregnated polymer.
1	37.	The method of Claim 35 including spraying the impregnated polymer.
i	38.	The method of Claim 35 wherein the slip agent includes
2	polytetraflou	rethylene.
1	39.	The method of Claim 37 wherein impregnating includes mixing
2	polytetraflou	rethylene powder with a polyol.
i	40.	The method of Claim 39 wherein mixing comprises high sheer mixing.
ì	41.	The method of Claim 40 wherein mixing is performed using a Cowles blade
2	mixer.	
1	42.	The method of Claim 35 including:
2		molding the impregnated polymer into a first section;
3		forming an interior of the drum with the section; and
4		applying fiberglass to an exterior of the first section.
1	43.	The method of Claim 42 including:
2		molding the impregnated polymer into a second section;
3		coupling the second section to the first section to form the interior of the
4	drum; and	

5		applying fiberglass windings to an exterior of the second section.
1	44.	The method of Claim 43 wherein the first section and the second section are
2	helical and wh	nerein coupling includes screwing the first section and the second section
3	together.	
1	45.	The method of Claim 43 including:
2		applying a sacrificial layer of fiberglass over the windings;
3		grinding the sacrificial layer to form a ground exterior surface having pores;
4	and	·
5	••	applying a top layer of fiberglass over the ground exterior surface.
1	46	A method for finishing an exterior of a concrete mixing drum having a
2	preliminary ex	sterior surface, the method comprising:
3		applying a sacrificial layer of fiberglass over the preliminary exterior
4	surface;	
5		grinding the sacrificial layer to form a ground surface having pores; and
6		applying a top layer on the ground surface over the pores.
1	47.	The method of Claim 46 wherein the sacrificial layer is ground using an
2	abrasive havin	ng at least a 16 grit.
1	48.	The method of Claim 46 wherein the top layer is chopper fiberglass.
1	49.	The method of Claim 48 wherein the top layer has a thickness of less than
2	0.50 inches.	

1	50.	A concrete mixing truck comprising:			
2		a chassis;			
3		a cab supported by the chassis;			
4		a drum supported by the chassis and extending over the cab, the drum having			
5	the first section	on extending in an archimedial spiral along an axial center line of the drum;			
6	and				
7		a second section extending in an archimedial spiral along the axial center line			
8	of the drum, wherein the first section and the second section extend adjacent to one another.				
1 .	51.	A concrete mixing drum comprising:			
2		a barrel having an inner surface and an outer surface; and			
3		at least one projection spirally extending along the inner surface, wherein the			
4	inner surface is provided by a polymer and wherein the outer surface has a convex portion				
5	and a concave portion.				
1 .	52.	The drum of Claim 51 wherein the concave portion is located along an axial			
2	midsection of the drum.				
1	53.	The drum of Claim 51 wherein the convex portion and the concave portion			
2	are integrally	formed as a single unitary body.			
1	54.	The drum of Claim 53 wherein the convex portion and the concave portion			
2	are formed from fiberglass windings.				
1	55.	The drum of Claim 51 wherein the inner surface is at least partially provided.			
2	by a first archimedial section.				
1	56.	The drum of Claim 51 wherein the projections are integrally formed as a			
2	single unitary	body with the inner surface of the barrel.			
ı	57.	The drum of Claim 55 wherein the inner surface is provided by a second			
2	archimedial s	ection screwed about the first section, wherein the first section and the second			
3	section each h	nave an exterior mid-portion concave surface.			

1 58. A rotary concrete mixing drum comprising an interior surface at partially

- provided by a material including one of a slip agent or strength-durability agent
- impregnated within the other of the slip agent or strength/durability agent.
